

Providing innovative solutions for
patient care and patient safety

LEARN MORE
observsmart.com

Our History

ObservSMART founded by two women with over 30 years of healthcare experience. They wanted to find a better way to ensure patient safety.

ObservSMART is an innovative tool that staff use to periodically check on patients and certify their safety. Consistent patient rounding is part of a patient safety initiative.

Our system was designed for your safety and wellbeing while you work on your recovery.

How does it work?

ObservSMART is a proximity-based, bluetooth-enabled safety system. You will wear a wearable that syncs with staff tablets.

When in proximity, staff can observe and document safety checks on their tablets. There is no need for staff to interrupt or access your wrist to make a check.

ObservSMART helps staff do a better job with their commitment to keep you safe and support you in your recovery.

- Our wearables are sport-like in design, lightweight and comfortable to wear.
- They are **100%** waterproof, so you can swim or shower with them on.
- Wearables are antimicrobial, and anti-organism.

Frequently asked questions

Is this a tracking device?

No, it is a Bluetooth system and does not hold any of your personal information. It does not track patients.

When will the wearable be put on?

The wearable is put on at admission and taken off at discharge.

Why do I need this?

The system helps staff to take better care of you and manage their daily tasks.

The system is designed to support your treatment, discharge goals and criteria, which includes making safe choices and allowing staff to keep you safe while recovering.
